

Alberta's First Solar Manufacturer

It is an exciting time for our province, our country and even the world; It is to our great pleasure to announce CyboInverter Canada (CyboCan) is opening/opened a Solar Photovoltaic Mini-Inverter manufacturing facility in Calgary, Alberta, at 4712 - 13 Street N.E., Calgary, AB, T2E 6P1. To be In full operation within 45 days.

Our Cyboinverter which is the world's first grid-interactive solar and hybrid mini-inverter. These inverters are MFA controlled which is a Power Management software that allows them to be programmable to sense and manage the power according to the various applications. e.i. Grid-tie; solar electric heating or solar air conditioning / grid feedback; off-grid; and more.

Some of the advantages of Cyboinverter over other inverters is the ability to accept 4 channels of same or even dissimilar PV panels, up to a peak output of 1.2 kW per inverter. Each inverter has a built in MPPT and Rapid Shutdown; and are able to piggyback off of one another. This allows for far less redundancy, and easier and quicker and less expensive install.

As of current CyboInverter's main factory is in the heart of Silicon Valley, all of our internal boards and components are also made in the USA. Our Mini-Inverters currently weigh 14 pounds (only 3.5 pounds per panel comparable to other inverters). As an environmentally conscious solar company, we had to look at the fact that we are currently selling hundreds of kilowatts of these inverters each month and are projected to be selling thousands in the coming months.

When we are in full production at our Alberta facility, the only component our USA facility will be producing is our circuit board; all other internal, external components will be produced, procured, assembled, programmed, tested and supported in Alberta or Canada. This will save a great deal in shipping weight and fuel. This is only an example of a few ways that we are environmentally saving by manufacturing in our own country.

We are expecting to have our first Alberta produced Mini Inverter in mid to late August, 2017. Our current inverter sales and installs are exponentially growing each week, this week we have had over 30+ distributor inquires. Albertans are being very supportive of us moving to manufacture solar products in-province and to support companies that support the Alberta economy.

CyboInverter Canada is an offshoot of Off Grid Heating along with a group of investors and CyboEnergy, to bring strong manufacturing, jobs and industry to Alberta; to provide mini inverters to our internal provincial market, our Canadian market and markets abroad.

Keith Kennedy Is the CEO of CyboCan, Keith is a deep rooted Alberta raised entrepreneur, with successes in Calgary based businesses such as: Tribal Expression; Tribal Made Body Jewelry; Off Grid Heating and Solar; and, CNC machine Distribution.

Keith's Passion Has always been solar, even dating back to his grade 4/5 science fair experiment. His passion for solar, entrepreneurial drive, manufacturing experience and customer service makes Keith the perfect captain to sail us in to sunny days.

If you have any questions or would like to book an appointment at our facility please call,

Keith Kennedy
